INTRODUCTION

A New Chapter

When Siltech introduced Classic Legend, it quickly became one of the most important product lines in our history. It brought many of our core technologies into a range that was more accessible, without losing the engineering discipline that defines Siltech.

The original Classic Legend series was launched as the successor to the 25th Anniversary Classic Series and represented more than thirty years of research into conductor and insulation materials. It combined G9 silver-gold conductors, high-grade insulation, and improved shielding to deliver the smooth tonal balance, stereo imaging, low distortion, and timing accuracy expected from Siltech. The current Classic Legend line includes 380, 680, and 880 models across interconnects, speaker cables, power cables, and digital cables.

Classic Legend MkII builds on that foundation with a clear purpose: to make the series quieter, more stable, and more complete.

The most important change is not cosmetic. It sits inside the cable. MkII introduces a new generation of shielding and construction techniques, including carbon shielding and advanced air-filled insulation construction. These developments help reduce unwanted electrical influence around the signal path, while allowing the conductor geometry to work with greater precision.

There is also a significant expansion of the range. For the first time, the Classic Legend family begins with the new **280 Series**. This brings Siltech's silver-gold conductor technology into a more approachable entry level, replacing the Explorer position and giving music enthusiasts a more direct entry into the Siltech sound.

Classic Legend was named with confidence because it had earned that place.

Classic Legend MkII continues the journey with stronger technology and a wider reach.■

Siltech Classic Legend MkII - Engineered From Within.

TECHNOLOGY
Technology That Enhances

Classic Legend MkII is built around the same principle that has guided Siltech for decades: the cable must preserve the signal, not decorate it.

At the heart of the series are **Siltech G9 silver-gold conductors**. This proprietary metallurgy is central to Siltech's identity and has been developed to reduce distortion while maintaining excellent conductivity, timing accuracy, and tonal purity. In MkII, this conductor platform is now available from the newly introduced 280 Series upward, making the full Classic Legend family a true silver-gold Siltech range.

For MkII, the conductor platform is supported by a new generation of internal shielding and insulation technology. The most important upgrade is the introduction of **carbon-based shielding**. Developed from wider Siltech Group research into electromagnetic noise control, this shielding approach provides strong absorption of EMI and RFI while avoiding the more restrictive character that some traditional shielding materials can introduce.

The purpose is simple: to lower the noise environment around the signal while preserving openness, speed, and spatial information.

Classic Legend MkII also introduces a more advanced **air-filled insulation construction**. Air is one of the most effective natural dielectrics. By increasing the role of air around the conductor, the cable reduces the electrical influence of surrounding materials and helps maintain low capacitance, stable signal behaviour, and a more effortless musical flow.

Every part of the signal path matters, including the connector. For Classic Legend MkII, almost all connectors in the lineup have been improved. Upgraded connector pin materials and a thicker direct nickel-free gold plating layer help create a cleaner, more stable contact point, preserving more of the signal's purity and contributing to the rich, natural sound expected from Siltech.

These technologies work together as one complete cable architecture. The silver-gold conductor carries the signal. The carbon shielding protects it. The air-filled construction gives it the space to behave naturally.

That is the real meaning of MkII: not a visual update, but a deeper technical evolution inside the cable.■

Siltech's unique silver-gold technology adds gold to silver wire to fill in the micro cracks. This results in dramatically lower distortion.

Classic Legend MkII 280

The new entry into Siltech silver-gold performance.

The 280 Series is a major new introduction within Classic Legend MkII. It replaces the former Explorer series and brings Siltech's signature silver-gold conductor technology to a more accessible level. Where Explorer used monocrystal copper conductors, Classic Legend MkII 280 moves the entry point of Siltech into a stronger technological direction, fully aligned with the brand's core metallurgy.

Designed for music lovers taking their first serious step into Siltech, 280 delivers the clarity, balance, and low-noise behaviour expected from the Classic Legend family. It is the most approachable way to experience true Siltech silver-gold engineering.That is the real meaning of MkII: not a visual update, but a deeper technical evolution inside the cable.

Classic Legend MkII 380

The balanced heart of the range.

The 380 Series continues as one of the most versatile choices within the Classic Legend family. It offers a clear step up in conductor, shielding, and construction performance while remaining practical for a wide range of high-end audio systems.

With MkII upgrades, 380 gains a quieter technical foundation and improved signal protection. It is designed for listeners who want unmistakable Siltech refinement, without moving into the higher levels of the series.

PRODUCT RANGE

Classic Legend MkII 680

Greater scale, control, and musical authority

The 680 Series brings more performance headroom to the Classic Legend MkII range. It is designed for systems where resolution, dynamics, and tonal refinement must work together without exaggeration.

With upgraded shielding and air-filled construction, 680 is built to reveal more information from the system while keeping the presentation natural and composed. It is a strong choice for serious high-end systems that need a cable with both precision and musical weight.

Classic Legend MkII 880

The flagship expression of Classic Legend MkII.

The 880 Series represents the highest level within Classic Legend MkII. It carries the full weight of the Classic Legend name, offering the most advanced execution of the series' conductor, shielding, insulation, and geometry principles.

Designed for demanding systems, 880 delivers the lowest noise, strongest control, and most complete musical expression within the range. It is the natural choice for listeners who want the finest Classic Legend MkII performance before moving into Siltech's Crown and Master Crown families.

RANGE OVERVIEW

	Model	Cores	**Pure silver-gold alloy G9**	Ground: Mono X-tal copper	Twisted pair	Coax	Twisted coax pair	Siltech special Multicell	Kapton	PEEK	Siltech Resonance Damping	Teflon	Air insulation	SPC shielding	Special wide-range shielding	Carbon-infused shielding	Cross section
